## Introduction

Edi has over 20 years of experience as a Software Engineering, working in development, customization, and implementation software for Web Page / Application / Mobile / APIs / SPA

## PROFESSIONAL EXPERIENCE

React Front-end Developer

**Tensill**

05/2022/current

**Skills:** React | NextJs | TailwindCss | Typescript | Git | CircleCi | NodeJs | Recoil | React Query | Jest | React Testing Library | ESLint

- Responsible for developing new features and maintaining core product that is an editor which makes writers to be editors, using Typescript, React, Recoil, TailwindCss and git.
- Responsible for creating new features in the administration tool, so administration users are able to change font style for their newsletters.
- Refactored a NodeJs project responsible for sending emails in order to have a clean and better code to maintain and add new features, using TypeScript, Express.
- Maintain a NextJs project which enables share newsletters over external web sites
- Using Figma as a guide to create and change pages for the editor.
- Participated in grooming and tickets breakdown for each sprint that used to last for two weeks.
- Created unit test using Jest and React testing library to guarantee code quality.
- Performed code review and code quality to ensure clean, scalable code and performance production results, approving pull requests from other teammates. inside the github.com
- Using Git as code versioning and CircleCi for deploy, on every push to the github the circle ci runs automatically to verify code quality using eslint and performing automated tests, when we created a label to the PR it created a temporary environment so it linked to the Jira so QA could performed a test.
- Deployed feature after QA and PR approved I was responsible to deploy features using github and monitoring it using CircleCi, after merge to production.
- Help teammates and juniors to understand the code base and product features.

**Full Stack Developer**  
**Rockstar Coders -**

08/2020-05/2022

**Skills:** React | Styled Component | Typescript | Git | Redux | NodeJS | GraphQL | CircleCI

- Responsible for refactoring the project using React and Typescript so the customer could be able to change the theme of the web site on the fly using styled components.
- Responsible for developing a new module to set a group of people to participate and manage a donation campaign for companies over the US using React Js and Typescript
- Responsible for developing new endpoints using Nodejs and Express to be consumed by the web application to save configuration for the ocean farm designed by the customers.
- Responsible for creating new features for a product that manages weddings using React, Styled components, Typescript and Apollo Graphql to communicate to the backend.
- Used git flow and CircleCi to perform continuous integration.
- Performed code review over the PR's opened in github to keep code quality.

**Full Stack Developer**  
**Na Feijuca - food delivery**

07/17 - 12/2020(freelancer)

**Skills:** React | Styled Component | Typescript | Git | Redux | NodeJS | Express | Redis | MySQL | React Native

- Responsible for developing a SPA using ReactJs and Redux, Saga for a delivery food client using NodeJs as backend with MySql Database and Redis (for queue message), MongoDB (for saving data for notifications).
  - This application takes care of the orders made by client in the food delivery using the app version or in the restaurant.
- Responsible for developing app in React Native for the customer using also Redux, Redux Saga (to check the stock in real time and also if the restaurant is open during the order) of the delivery food where the client see the menu, order foods, follow the delivery man in the map, using socket and also gps.
- Created NodeJs server using Express to be consumed by the Web and Mobile application to store and retrieve information imputed by the users and final customer
- Created the design of the application using Figma to be a guide for the development phase.
- Used git flow and Vercel for CI, for every approved QA and PR the deploy started automatically deploying the new features to the production.

**Full Stack Developer**  
**Evox Technology Corp / JBS**

07/17 - 08/2020

**Skills:** .Net C# | Typescript | Git | Asp.Net MVC | SQL Server | JQuery

- Responsible for developing MVC 5 Application with Razor engine Framework , using Typescript, JQuery, Bootstrap, IOC and SQL Server DataBase.
- Responsible for creating service jobs to import data between systems using Hangfire, Entity Framework, and SQL Server.
- Created SQL queries and views to be consumed by Web.Api application utilizing Entity Framework
- Performed code review using Azure Agile development process
- Created PR using TFS so other teammates were able to perform code review.

**System Analyst - Senior Full Stack Developer**  
**Accenture Avanade**

09/16 - 07/17

**Skills:** .Net C# | Typescript | Git | WCF | Angular | NodeJS

- Responsible for developing middleware controller for the security access between the external client, using .Net C# Framework 4.5 to access Mainframe DB2 database.
- Responsible for developing new endpoints using NodeJs to access a set of web APIs developed with WCF.
- Developed an account portal for a bank customers using Angular js communicating with NodeJs service layer
- Performed code review using gitlab as ci environment and git to code versioning.
- Participated on project decisions to define better approaches for specific features.
- Created unit test using Jest and Mock for the Angular application.

**EDUCATION**

**Bachelor of Analyst Systems - 4 years**

2009-2012

✓ Uniban University

**Udemy plataform courses. (2017 to 2019)**

- ✓ React - The Complete Guide Course (Redux, Router)
- ✓ React Native - Complete Course (with Redux)
